

## Logging Full Access Administration

DOMINO 8.5 READY

While Lotus Domino does allow you to log every time someone invokes the Full Access Administration privilege, the basic logging mechanism does not provide a full audit trail of the specific actions that were invoked while the Full Access Administration privilege was activated. SecurTrac fills this void and provides detailed audit trail logging of what exactly the Domino Administrator did while the Full Access Administration privilege was being used.

- Log Full Access Administration activity in Mail databases, Domino application databases as well as the Domino Directory for Create, Open, Update & Delete actions.
- Log the simple fact that a database was opened, even if no documents were ever accessed.
- Log exactly which database views were accessed in a particular database while using Full Access Administration.

Action Details	
Initiator :	Notes Admin/Thunder
Database Title :	Employee Record Database
Form :	FEmployee
Document ID :	OF8A26B18A-52CDE38B-ON852571DA:0058B1B7
