

SecurTrac 2.1.11 offers three key new features. These new features include:

- Support for Domino 6.5
- Mail Content and Attachment Monitoring
- New Packaging of Monitors – version display

Support for Domino 6.5

SecurTrac 2.1.11 has been tested and qualified to support Domino 6.5. This will be of interest to customers who are or will run the most recent Notes offering from Lotus.

Mail Content and Attachment Monitoring

The Mail Monitor configuration now provides an option for Content logging. There are three options to choose: None, Content Only, Content & Attachment.

Figure 1: Configuring the Mail Monitor for Content Logging

Mail Monitor
Created: 10/30/2003 09:26:39 AM EST

Basics | Monitor | Administration

Monitor

Mail Action | Mail Delegation

Mail Action

This monitor will generate a detailed log when a mail action is performed and the mail satisfy the criteria.

Action

Select the action to log:

Send Open Undeliver
 Route Update Illegal Open
 Receive Delete

Criteria to Match

Log if formula is true

Content Logging

Log Mail Content & Attachment

None Content Only Content & Attachment

Warning: Enabling this option will increase server loading significantly. Please use this option carefully.

Enablement

Disable monitoring mail action

If None is selected then the basic mail fields are stored in the audit log as in Figure 2.

Sally,

Attached is the draft proposal for ABC company. Review it and suggest any changes that is necessary.

Thanks,
 Jim.

If the Content & Attachment option is selected, the text within the email message body is written to the audit log. If there are attachments, the name will be displayed and the Attachment tab will also provide details on the attachment. In addition a copy of the attachment will be stored within the audit record and can be viewed by clicking on the attachment icon in the Content or Attachment tab. Multiple attachments can be stored and displayed.

New Packaging of Monitors – Version Display

SecurTrac Complete Suite includes all of the available monitors for SecurTrac. The Complete Suite includes:

- Mail Monitor
- Database Monitor
- Domino Directory Monitor
- Notes.ini Monitor
- Intrusion Detection

With the release of SecurTrac 2.1.11, new modules have been created allowing customers to purchase a module at a price lower than the Complete Suite price.

SecurTrac Modules are now offered and include the following:

- **Database Monitor Module** (Database auditing that captures field level changes, design changes, ACL changes and more)
- **Mail Monitor Module** (Mail information and complete content)
- **Admin Monitor Module** (Domino Directory, Notes.ini, Intrusion Detection)

To display the server license version and activated monitors, click on the SecurTrac Server License button.
